PREFACE

Hitachi Dot Matrix Liquid Crystal Display (LCD) Module was developed to display numerals, alphabet, symbols, graphics, etc.

The twist-nematic type liquid crystal, with a high contrast ratio was used. Due to its small size, light weight, low voltage, low power consumption, easy handling, etc., the Hitachi Dot Matrix LCD Module has been widely used as a display component for portable data terminal equipment, word processors and high class electronic tabletop calculators in Japan and abroad.

This brochure describes the electrical and optical characteristics, external dimensions and precautions in handling the 21 standard type of products, and it can be used when selecting equipment.

Note: The information contained herein is tentative and may be changed without prior notices. It is therefore advisable to contact Hitachi before processing with the design of equipment in incorporating this product.

FEATURES:

1. By the combination of dots, numerals, alphabets, symbols, graphics, etc. can be displayed.
2. Due to the twist-nematic type liquid crystal, bright and high-contrast displays can be obtained.
3. Due to low drive voltage and low power consumption, this LCD module may be operated by battery.
4. An LSI is loaded exclusively for the LCD element drive. Also, a type containing a control LSI is available.
5. Due to its small size and light weight, compact display equipment can be constructed.
6. Various types are available, from small-sized modules for character display, to large-sized display module for graphics.

APPLICATIONS:

- Portable data terminal equipment
- Word processor
- High class electronic tabletop calculator
- POS terminal equipment
- Measuring instruments
- Other display devices

OPTICAL DATA

Item	Symbol	Condition	min.	typ.	max.	Unit	Note
Viewing area	$\phi 2 - \phi 1$	$K = 1.4$	20	—	—	deg.	1, 2, 8
Contrast ratio	K	$\phi = 25^\circ$ $\theta = 0^\circ$	—	3	—	—	3
Response time (rise)	t_r	$\phi = 25^\circ$ $\theta = 0^\circ$	—	200	400	ms	4, 5
				250	400		4, 6
				150	250		4, 7
Response time (fall)	t_f	$\phi = 25^\circ$ $\theta = 0^\circ$	—	200	400	ms	4, 5
				250	400		4, 6
				150	250		4, 7

Note 1. Definition of θ and ϕ

Note 2. Definition of viewing angle $\phi 1$, and $\phi 2$

Note 3. Definition of contrast "K"

$$K = \frac{\text{Brightness of non-selected segment (B}_2\text{)}}{\text{Brightness of selected segment (B}_1\text{)}}$$

Note 4. Definition of optical response

Note 5. Applied type: H2532A · H2535 · H2538A · H2555 · H2568

Note 6. Applied type: H2539 · H2570 · LM015 · LM027 · H2571 · H2572 · LM016 · LM032 · LM017 · LM018 · LM041 · LM 054 · LM 038

Note 7. Applied type: H2525 · LM200 · LM021

Note 8. Viewing area of LM200: typical 20deg.

HANDLING PRECAUTIONS

PACKAGE

1. If the display surface is dirty, wipe lightly with degreased cotton or chamois and benzine.
2. The glass may be broken or cracked. Special care should be taken when handling.
3. The polarization plate can be easily damaged. Glasses and tweezers must not be set.

STRUCTURE

1. As shown in the figure, the module is fixed by using the PC board setting holes. When mounting, special care should be given to the following points:
 - (1) For protection of the polarization plate and the liquid crystal cell, the protection plate made of acrylic, etc. should be installed.
 - (2) Installation should be performed with a clearance of 0.5 mm between the module and the setting plate to prevent module cover damage. When camber or twist force is great, the liquid crystal cell will be under stress, hence the spacer height tolerance should be ± 0.1 mm.

- As this module is provided with C-MOS LSI, the care to take such a precaution as to grounding the operator's body is required when handling it.

OPERATION CAUTIONS

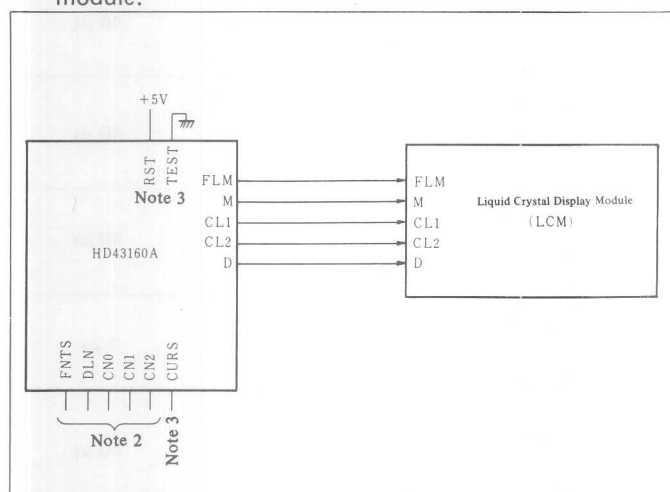

- If the liquid crystal drive voltage (V_o) exceeds the designation, its service life will be shortened, consequently the module should be used within the designated range.
- When DC voltage is applied, electrical and chemical reactions are generated which will shorten the service life; so when an M signal is input from the outside, the duty must be $50 \pm 1\%$. (For the M signal, refer to the interface timing chart of each type.)
- If the operation temperature is lower than designated, the ON/OFF operation becomes slower. If the temperature is higher than designated, the display color becomes blue-black. However, when the temperature returns normal, the display also returns normal.
- The liquid crystal drive voltage (V_o) should be adjusted to obtain an optimal contrast.

CONTROL LSI HD43160A

- The HD43160A is a CMOS LSI developed to control the LCD module described below, and contains a character generator and character data memory.

Applied type: H2532A, H2535, H2538A, H2539, H2555, and H2568.

Example of a connection between HD43160A and LCD module.

- For details, refer to "HITACHI DOT MATRIX LIQUID CRYSTAL DISPLAY CONTROLLER IC HD43160".

Note 1: When CURS = "1", the cursor has a 5 x 1 dot constitution. (■■■■■)
When CURS = "0", the cursor has a 1 x 1 dot constitution. (□□□□)

Note 2: Treatment examples for all types are shown in the table below.

0: GND
1: V_{DD} (+5V)

Type No.	Terminal	FNTS	DLN	CN0	CN1	CN2
H2532A		0	0	0	1	0
H2535		0	1	0	0	1
H2538A		0	0	1	0	1
H2539		0	1	1	1	1
H2555		0	0	1	0	1
H2568		1	0	1	0	1

Note 3: The test terminal is fixed at the "0" level.
The RST terminal is normally at the "1" level.
When set at the "0" level, oscillation is stopped and DC voltage is loaded to the liquid crystal.

CONTROL LSI HD44780 (LCD-II)

The control LSI HD44780 is contained in the following LCD modules. The LCD modules below are compact and easy to use.

Several instructions can be found on page 8, and a comparison of the character code and the character pattern is shown on page 9.

- LCD modules containing the control LSI HD44780
H2570, H2571, H2572, LM015, LM027, LM016, LM032, LM017, LM018, LM041, LM054, LM038.

For details, refer to "HITACHI MICROCOMPUTER SYSTEM: DOT MATRIX LIQUID CRYSTAL DISPLAY CONTROLLER & DRIVER LCD-II (HD44780) USER'S MANUAL".

INSTRUCTIONS

Applied type: H2570, H2571, H2572, LM015, LM027, LM016, LM032, LM017, LM018, LM041, LM054, LM038

Instruction	Code										Description	Execution time (when fosc is 250 KHz)
	RS	R/W	DB7	DB6	DB5	DB4	DB3	DB2	DB1	DB0		
Clear display	0	0	0	0	0	0	0	0	0	1	Clears all display and returns the cursor to the home position (Address 0).	82 μ s~1.64 ms
Return home	0	0	0	0	0	0	0	0	1	*	Returns the cursor to the home position (Address 0). Also returns the display being shifted to the original position. DD RAM contents remain unchanged.	40 μ s~1.6 ms
Entry mode set	0	0	0	0	0	0	0	1	I/D	S	Sets the cursor move direction and specifies or not to shift the display. These operations are performed during data write and read.	40 μ s
Display ON/OFF control	0	0	0	0	0	0	1	D	C	B	Sets ON/OFF of all display (D), cursor ON/OFF (C), and blink of cursor position character (B).	40 μ s
Cursor and display shift	0	0	0	0	0	1	S/C	R/L	*	*	Moves the cursor and shifts the display without changing DD RAM contents	40 μ s
Function set	0	0	0	0	1	DL	N	F	*	*	Sets interface data length (DL) number of display lines (L) and character font (F).	40 μ s
Set CG RAM address.	0	0	0	1	A_{CG}						Sets the CG RAM address. CG RAM data is sent and received after this setting.	40 μ s
Set DD RAM address	0	0	1	A_{DD}						Sets the DD RAM address. DD RAM data is sent and received after this setting.	40 μ s	
Read busy flag & address	0	1	BF	AC						Reads Busy flag (BF) indicating internal operation is being performed and reads address counter contents.	1 μ s	
Write data to CG or DD RAM	1	0	Write Data						Writes data into DD RAM or CG RAM.	40 μ s		
Read data to CG or DD RAM	1	1	Read Data						Reads data from DD RAM or CG RAM.	40 μ s		
	I/D = 1: Increment I/D = 0: Decrement S = 1: Accompanies display shift. S/C= 1: Display shift S/C= 0: Cursor move R/L= 1: Shift to the right. R/L= 0: Shift to the left. DL = 1: 8 bits DL = 0: 4 bits N = 1: 2 lines N = 0: 1 line F = 1: 5 x 10 dots F = 0: 5 x 7 dots BF = 1: Internally operating BF = 0: Can accept instruction										DD RAM: Display data RAM CG RAM: Character generator RAM A_{CG} : CG RAM address A_{DD} : DD RAM address Corresponds to cursor address. AC: Address counter used for both of DD and CG RAM address.	Execution time changes when frequency changes. (Example) When fosc is 270 KHz: $40 \mu s \times \frac{250}{270} = 37\mu s$

* Don't care

For details, refer to "HITACHI MICROCOMPUTER SYSTEM: DOT MATRIX LIQUID CRYSTAL DISPLAY CONTROLLER & DRIVER LCD-II (HD44780) USER'S MANUAL".

CONTROL LSI ATTACHMENT TYPE LCD MODULE

This module consists of LCD driver, drive LSI, PC board, and other parts.

By attaching the control LSI HD43160A, numerals, alphabets, Kana, and symbols can be displayed.

H2532A · H2535 · H2538A · H2539 · H2555 · H2568

H2532A

- 16-Position alpha-numeric display
- Control LSI HD43160A attachment type (see page 7)

MECHANICAL DATA (nominal dimensions)

Module size 84W x 44H x 15D (max) mm
 Effective display area 61W x 15.8H mm
 Character size (5x7 dots) 2.9W x 5.5H mm
 Pitch 3.6 mm
 Dot size 0.5W x 0.7H mm
 Weight about 40 g

ABSOLUTE MAXIMUM RATINGS

Supply voltage ($V_{DD}-V_{SS}$) 7 V max.
 ($V_{DD}-V_{EE}$) 13.5 V max.
 Input voltage (CL1, CL2, D, M, FLM) . . . $V_{SS} \leq V_{IN} \leq V_{DD}$
 Operating temperature (T_a) 0 to 50°C
 Storage temperature (T_{stg}) -20 to 60°C

ELECTRICAL CHARACTERISTICS

Power supplies ($V_{DD}-V_{SS}$) +5 ±0.25V
 Power supplies ($V_{EE}-V_{SS}$) -5 ±0.5 V
 Current consumption +5V 1 mA max.
 -5V 1 mA max.
 Input high voltage 0.7 V_{DD} min.
 Input low voltage 0.3 V_{DD} max.
 Power supply for LCD drive (Recommended) (V_O-V_{EE})
 at $T_a = 0^\circ\text{C}$ 5.3 V typ.
 at $T_a = 25^\circ\text{C}$ 4.5 V typ.
 at $T_a = 50^\circ\text{C}$ 3.7 V typ.

OPTICAL DATA. See page 6

INTERNAL PIN CONNECTION

Pin No.	Symbol	Level	Function
1	FLM	H	The FLM signal indicates the beginning of each display cycle.
2	M	H/L	Control signal for a.c. driving.
3	CL1	H→L	The CL1 latches the serial data in the shift registers.
4	D	H/L	Serial row data of each character.
5	CL2	H→L	Clock signal for shifting the serial data.
6	V_{DD}	—	Power supply for logic circuit.
7	V_{SS}	—	Ground.
8	V_{EE}	—	Power supply for LC driving.
9	V_O	—	Operating voltage for LC driving.
10	NC	—	No connection.

BUILT-IN CONTROL LSI TYPE LCD MODULE

This is a dot matrix LCD module containing the control LSI for character display. Functions such as control, refresh, and display are operated by the built-in control LSI.

This LCD module can display 160 type JIS characters and symbols and 32 type special characters and symbols. This LCD module can be interfaced to the 4-bit or 8-bit MPU, so the character display and the display shift can be easily operated by using control commands. This LCD module also contains the character generator RAM, hence user's patterns can be displayed.

14	DB7	H/L	

Note:

In the HD44780, the data can be sent in either 4-bit 2-operation or 8-bit 1-operation so that it can interface to both 4 and 8 bit MPU's.

- (1) When interface data is 4 bits long, data is transferred using only 4 buses of $DB_4 \sim DB_7$, and $DB_0 \sim DB_3$ are not used. Data transfer between the HD44780 and the MPU completes when 4-bit data is transferred twice. Data of the higher order 4 bits (contents of $DB_4 \sim DB_7$ when interface data is 8 bits long) is transferred first and then lower order 4 bits (contents of $DB_0 \sim DB_3$ when interface data is 8 bits long).
- (2) When interface data is 8 bits long, data is transferred using 8 data buses of $DB_0 \sim DB_7$.

7	DB0	H/L	Data bus line Note (1), Note (2)
8	DB1	H/L	
9	DB2	H/L	
10	DB3	H/L	
11	DB4	H/L	
12	DB5	H/L	
13	DB6	H/L	
14	DB7	H/L	

Note:

In the HD44780, the data can be sent in either 4-bit 2-operation or 8-bit 1-operation so that it can interface to both 4 and 8 bit MPU's.

- (1) When interface data is 4 bits long, data is transferred using only 4 buses of $DB_4 \sim DB_7$, and $DB_0 \sim DB_3$ are not used. Data transfer between the HD44780 and the MPU completes when 4-bit data is transferred twice. Data of the higher order 4 bits (contents of $DB_4 \sim DB_7$, when interface data is 8 bits long) is transferred first and then lower order 4 bits (contents of $DB_0 \sim DB_3$, when interface data is 8 bits long).
- (2) When interface data is 8 bits long, data is transferred using 8 data buses of $DB_0 \sim DB_7$.

GRAPHIC LCD MODULE

HD 61830 Graphic LCD Controller

- Display Controller and Character Generator for Liquid Crystal Dot Matrix Graphic Display Systems

The HD61830 receives the display data from a microcomputer and stores them in an external RAM. It converts these data into the serial display pattern, and transfers them to the LCD drivers.

Two kinds of display modes are available:

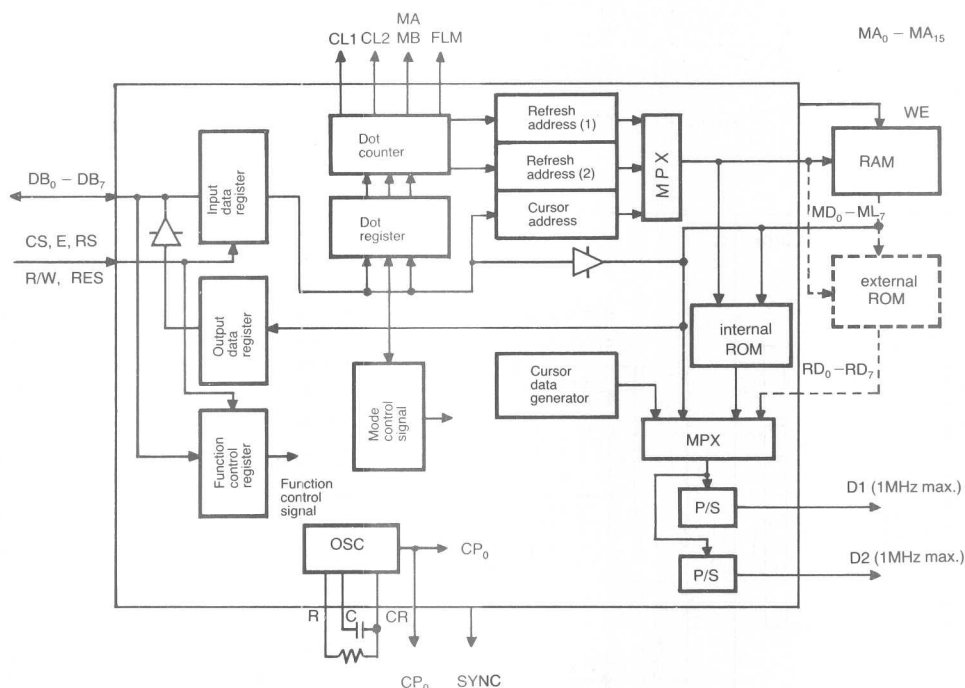

The Semi-Graphic mode and the Full-Graphic mode.

FEATURES

- Full-Graphic mode with 512,000 dots
- Semi-Graphic mode with 192 characters by the internal character generator ROM, plus 4,000 characters by an external ROM
- Display Duty of 1/128 min.
- Other functions controlled by the microcomputer
 - Scroll
 - Cursor ON/OFF/Blink
 - Display Clear
- 60-pin flat plastic package
- Single 5V power supply
- TTL compatible inputs and outputs

BLOCK DIAGRAM

H2525

TIMING CHARACTERISTICS

Item	Symbol	min.	typ.	max.	Unit
Clock frequency	f_{CL2}	—	—	500	KHz(Note 1)
Clock pulse width (High level)	t_{CWH}	800	—	—	ns
Clock pulse width (Low level)	t_{CWL}	800	—	—	ns
Clock set up time	t_{CSU}	500	—	—	ns
Data set up time	t_{SU}	300	—	—	ns
FLM set up time	t_{FSU}	300	—	—	ns
M delay time	t_{DM}	-1000	0	+1000	ns (Note 2)
FLM hold time	t_{FH}	0	—	—	ns
Data hold time	t_{DH}	300	—	—	ns

Note 1. Optimum frequency for the highest contrast is different by the type of module.

Note 2. Timing of M signal to CLI may be in the range of ± 1000 ns.

Note 3. In adjusting FLM frequency, avoid setting it around the commercial frequency (50Hz \pm 2Hz or 60Hz \pm 2Hz) to prevent LCD flicker.

13	DB6	H/L	
14	DB7	H/L	

Note:

In the HD44780, the data can be sent in either 4-bit 2-operation or 8-bit 1 operation so that it can interface to both 4 and 8 bit MPU's.

- (1) When interface data is 4 bits long, data is transferred using only 4 buses of $DB_4 \approx DB_7$ and $DB_0 \approx DB_3$ are not used. Data transfer between the HD44780 and the MPU completes when 4-bit data is transferred twice. Data of the higher order 4 bits (contents of $DB_4 \approx DB_7$ when interface data is 8 bits long) is transferred first and then lower order 4 bits (contents of $DB_0 \approx DB_3$ when interface data is 8 bits long).
- (2) When interface data is 8 bits long, data is transferred using 8 data buses of $DB_0 \approx DB_7$.

LCDs WITH TRIPLEX DRIVE

HD61602/3 - CMOS LCD DRIVER FEATURES

- Two operation modes: Static drive only or static and dynamic drive
- Two supply voltage modes: 3V or 5V
- Low current consumption
30μA typ. for 3V operation
50μA typ. for 5V operation
- Built-in power supply for LCD driver
- 8 bit data interface
- 51 segment outputs (64 segment outputs max.)

80 Pin Flat Pack

HD6301/03

8-Bit CMOS MPU

HD6301

- 8-Bit CMOS Microcomputer System for LCD Module Application.
- Single-Chip Version

The HD6301V0 is an 8-bit CMOS single-chip microcomputer unit, Object Code compatible with the HD6801. 4kB ROM, 128 bytes RAM, Serial Communication Interface (SCI), parallel I/O terminals as well as three functions of timer on chip are incorporated in the HD6301V0. It is bus compatible with HMCS6800, provided with some additional functions such as an improved execution time of key instruction plus several new instructions of operation to increase system throughput. The HD6301V0 can be expanded up to 65k words. Like the HMCS6800 family, I/O level is TTL compatible with +5.0V single power supply. By using the Hitachi's 3 μ m CMOS process, low power consumption is realized. And as lower power dissipation mode, HD6301V0 has Sleep Mode and Stand-By Mode. So flexible low power consumption application is possible.

FEATURES

- Object Code Upward Compatible with HD6801 Family
- Abundant On-Chip Functions Compatible with HD6801V0;
 - 4kB-ROM, 128 Bytes RAM, 29 Parallel I/O Lines,
 - 2 Lines of Data Strobe, 16-bit Timer, Serial Communication Interface.
- Low Power Consumption Mode: Sleep Mode, Standby Mode
- Minimum Instruction Cycle Time
 - 1 μ s (f=1MHz), 0.67 μ s (f=1.5MHz), 0.5 μ s (f=2MHz)
- Bit Manipulation, Bit Test Instruction
- Protection from System Burst: Address Trap, Op-Code Trap
- Up to 65k Words Address Space
- Wide Operation Range
 - V_{CC} = 3 to 6V (f=0.5MHz), f=0.1 to 1.5MHz
 - (V_{CC} = 5V \pm 10%), f = 0.1 to 2.0MHz (V_{CC} = 5V \pm 5%)

HD6303

- 8-Bit CMOS Microcomputer System for LCD Module Application. Instruction Set compatible with HD6301.
- Multi-Chip Version

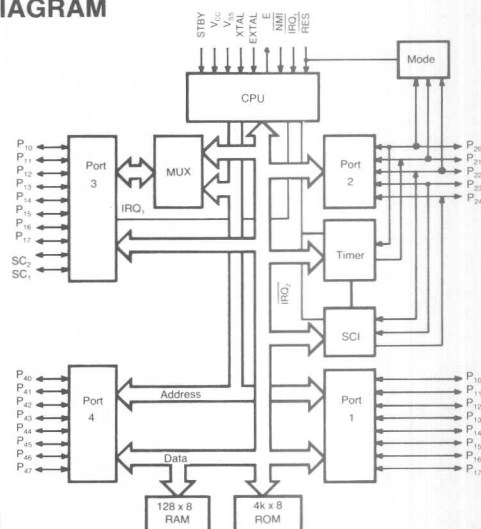

FEATURES

- Object Code Upward Compatible with the HD6800, HD6802, HD6801
- Multiplexed Bus (D₀ \approx D₇/A₀ \approx A₇)
- Abundant On-Chip Functions Compatible with the HD6301V0: 128Bytes RAM, 13 Parallel I/O Lines (including Timer, SCI I/O Terminals), 16-bit Timer, Serial Communication Interface (SCI)
- Low Power Consumption Mode: Sleep Mode, Stand-By Mode
- Minimum Instruction Cycle Time
 - 1 μ s (f=1MHz), 0.67 μ s (f=1.5MHz), 0.5 μ s (f=2.0MHz)
- Bit Manipulation, Bit Test Instruction
- Error Detecting Function: Address Trap, Op-Code Trap
- Up to 65k Words Address Space
